

# BIORAMI

## Boon

The woody part of the stem used in hemp for construction purposes as an insulator and wall filler. Hemp shives can also be used as a raw material for the production of cubes for mushrooms or oyster mushrooms.

## Hemp straw

The initial raw material for the production of fiber and shives. Straw fiber can be used to produce yarn, disinfection mats, hemp tow or hemp tape. The shive can be used in construction, mycelium production or as an energy mattress.

## Linen shives

Flax shive is also used in nurseries as mulch for plants because it retains moisture very well and for a long time and limits the growth of weeds.
